A Computer Scientist's Guide to Cell Biology Jul 28 2020 This book is designed specifically as a guide for Computer Scientists needing an introduction to Cell Biology. The text explores three different facets of biology: biological systems, experimental methods, and language and nomenclature. The author discusses what biologists are trying to determine from their experiments, how various experimental procedures are used and how they relate to accepted concepts in computer science, and the vocabulary necessary to read and understand current literature in biology. The book is an invaluable reference tool and an excellent starting point for a more comprehensive examination of cell biology.

Towards New Ways of Terminology Description Apr 17 2022 Based on an empirical study of categorisation and lexicalisation processes in a corpus of scientific publications on the life sciences, Rita Temmerman questions the validity of traditional terminology theory. Her findings are that the traditional approach impedes a pragmatic and realistic description of a large number of categories and terms. Inspired by the cognitive sciences, she develops an alternative. The main principles of this new theory imply: a combined semasiological and onomasiological perspective; only few categories can be clearly delineated; form and content of definitions vary according to category types and user's requirements; synonymy and polysemy are functional in special language and a diachronic approach is unavoidable. This last principle implies the varying importance of historical information in definitions, the non-arbitrariness of lexicalisation and the importance of cognitive models. In a last chapter the author shows how the methods and principles of the alternative approach are applicable in terminography and how this is going to have an impact on software for terminological database construction. This book will be valuable for specialists in terminology theory, practising terminographers and for anybody interested in special language, cognitive models and prototype theory.

□□□□□□□□ Jun 07 2021 This book is a supplement to the textbook Basic Technical Japanese. It introduces 100 new kanji and more than 1500 technical terms that appear frequently in documents dealing with biotechnology, in addition to reviewing vocabulary containing the 365 kanji presented in Basic Technical Japanese. The text offers ten lessons, each presenting key vocabulary and ten new kanji, which reappear in the exercises for that lesson and throughout subsequent lessons, reinforcing learning. The exercises emphasize vocabulary building, kanji recognition, definition matching, and translation skills. An introductory lesson reviews the katakana and hiragana writing systems, as well as the kanji presented in the first ten chapters of Basic Technical Japanese. The lessons in this book have been keyed to the final ten chapters of Basic Technical Japanese, so that students can use the two volumes together to build a Japanese vocabulary and to practice translation related to biotechnology.

Plant Biotechnology Vocabulary Jan 14 2022 This English-French, French-English glossary deals with plant biotechnology, which includes all the techniques that draw on the biochemical properties of biological entities, either as they occur in nature or as modified by genetic recombination, to improve agricultural production or the industrial manufacturing of various pharmaceutical products.

Molecular Biology Dec 01 2020 Molecular Biology: Academic Cell Update provides an introduction to the fundamental concepts of molecular biology and its applications. It deliberately covers a broad range of topics to show that molecular biology is applicable to human medicine and health, as well as veterinary medicine, evolution, agriculture, and other areas. The present Update includes the study guide with online content, journal specific images, and test bank. It also offers vocabulary flashcards and online self-quizzing called Test Prep. The book begins by defining some basic concepts in genetics such as biochemical pathways, phenotypes and genotypes, chromosomes, and alleles. It explains the characteristics of cells and organisms, DNA, RNA, and proteins. It also describes genetic processes such as transcription, recombination and repair, regulation, and mutations. The chapters on viruses and bacteria discuss their life cycle, diversity, reproduction, and gene transfer. Later chapters cover topics such as molecular evolution; the isolation, purification, detection, and hybridization of DNA; basic molecular cloning techniques; proteomics; and processes such as the polymerase chain reaction, DNA sequencing, and gene expression screening. *Now with an online study guide with the most current, relevant research from Cell Press *Full supplements including test bank, powerpoint and online self quizzing *Up to date description of genetic engineering, genomics, and related areas * Basic concepts followed by more detailed, specific applications * Hundreds of color illustrations enhance key topics and concepts * Covers medical, agricultural, and social aspects of molecular biology * Organized pedagogy includes running glossaries and keynotes (mini-summaries) to hasten comprehension

Vocabulaire du génie cellulaire Sep 10 2021 First of five volumes covering the vocabulary of cell engineering, referring to the methods used in the culture, transformation, and fusion of cells and using terms from virology, cell biology and molecular biology. This first volume contains structural and functional terms relating to living cells and includes concepts derived from processes during somatic and germ cell division. Main entry terms are accompanied by a definition or context, or both. Definitions used are produced exactly from the sources consulted, were written by combining elements of existing definitions using information from specialized sources, or were formulated following consultations with specialists or suggested by them. Terms are arranged alphabetically by English term, with cross-references to the recommended English term, then accompanied by a French equivalent, followed by a context or definition.

Life from an RNA World Jun 26 2020 A majority of evolutionary biologists believe that we now can envision our biological predecessors--not the first, but nearly the first, living beings on Earth. This book is about these vanished forebears. The era between the first rudimentary life on Earth and the appearance of more complex beings is called the RNA world. It is RNA (ribonucleic acid) long believed to be a mere biologic copier and messenger, that offers a glimpse into our ancient predecessors. To describe early RNA creatures, here called "ribocytes" or RNA cells, the author uses basics of molecular biology. He reviews our current understanding of the tree of life, examines the structure of RNA itself, explains the operation of the genetic code, and more. Courting controversy among those who question the role of ribocytes -- citing the chemical fragility of RNA and the uncertainty about the origin of an RNA synthetic apparatus -- he offers a vision of early life on Earth.

The Anglicization of European Lexis May 26 2020 This volume explores the lexical influence of English on European languages, a topical theme with linguistic and cultural implications. It provides an extensive introductory background to a cross-national view of English-induced lexical borrowing, posing crucial analytical questions such as what counts as an Anglicism. It also offers a typology of borrowings with examples from the languages represented: Armenian, Danish, French, German, Italian, Norwegian, Polish, Serbian, Spanish, and Swedish. The articles in this volume address general and language-specific issues related to the analysis and collection of Anglicisms, extending the scope to the largely unexplored area of phraseology and bringing new insights into corpus-based and corpus-driven methodologies. This volume fits into a well-established and constantly developing research field and will appeal to scholars interested in the spread of English as an international language, contact and contrastive linguistics, lexicology and lexicography, and computer corpus lexicography.
